User Stories

User Story 5: As a user if I'm hungry and I want to look up a recipe.

Description: The user will navigate to the recipes tab where there will be a search bar. The user can type in what they're looking to eat, for example 'sandwich', in the search bar and when they click the "Find Me a Recipe" button the app will return a list of results matching the user's query. Then the user can pick whichever result interests them the most and they will be redirected to a new page with recipe instructions so the user can whip up the item.
